

Tech Stack

k.

1. Development Environment & Coding Tools

VS Code	Primary code editor with extensions for linting, debugging, and Git.
Cursor	AI-first IDE for fast refactors, multi-file edits, and pair programming.
Antigravity	Agentic development environment for AI-assisted coding workflows.
Git & GitHub	Version control, pull requests, code review, and collaboration.

2. Web Frameworks

React	Component-based frontend development with modern hooks and state patterns.
FastAPI	High-performance async Python APIs with automatic OpenAPI docs.
Flask	Lightweight Python framework for quick services and prototypes.

3. AI / ML Frameworks

PyTorch	Deep learning research, model training, and fine-tuning.
Hugging Face	Pre-trained models, datasets, and pipelines for NLP and vision.

4. Agentic AI Tools

LangChain	Composable chains, tools, memory, and agent orchestration.
LlamaIndex	RAG pipelines, indexing, and retrieval over custom data sources.
AutoGen	Conversational multi-agent framework for collaborative task solving.

5. LLM Platforms

OpenAI (GPT-4o / GPT-4)	General-purpose reasoning, function calling, and structured outputs.
Anthropic Claude	Long-context reasoning, coding, and safe tool use.
Google Gemini	Multimodal tasks and large-context document processing.

6. AI Tools I Use Frequently

ChatGPT & Claude	Daily research, drafting, debugging, and ideation.
GitHub Copilot	In-editor code completion and inline AI chat.
Perplexity	Source-grounded research and quick technical lookups.

7. Cloud Platforms

Vercel	Frontend and serverless deployments with preview environments.
Firebase	Auth, Firestore, hosting, and serverless functions.

8. Databases

PostgreSQL	Primary relational database with JSONB and advanced indexing.
MySQL	Reliable relational store for traditional web applications.
MongoDB	Document store for flexible, schema-light data models.
